Customer Information

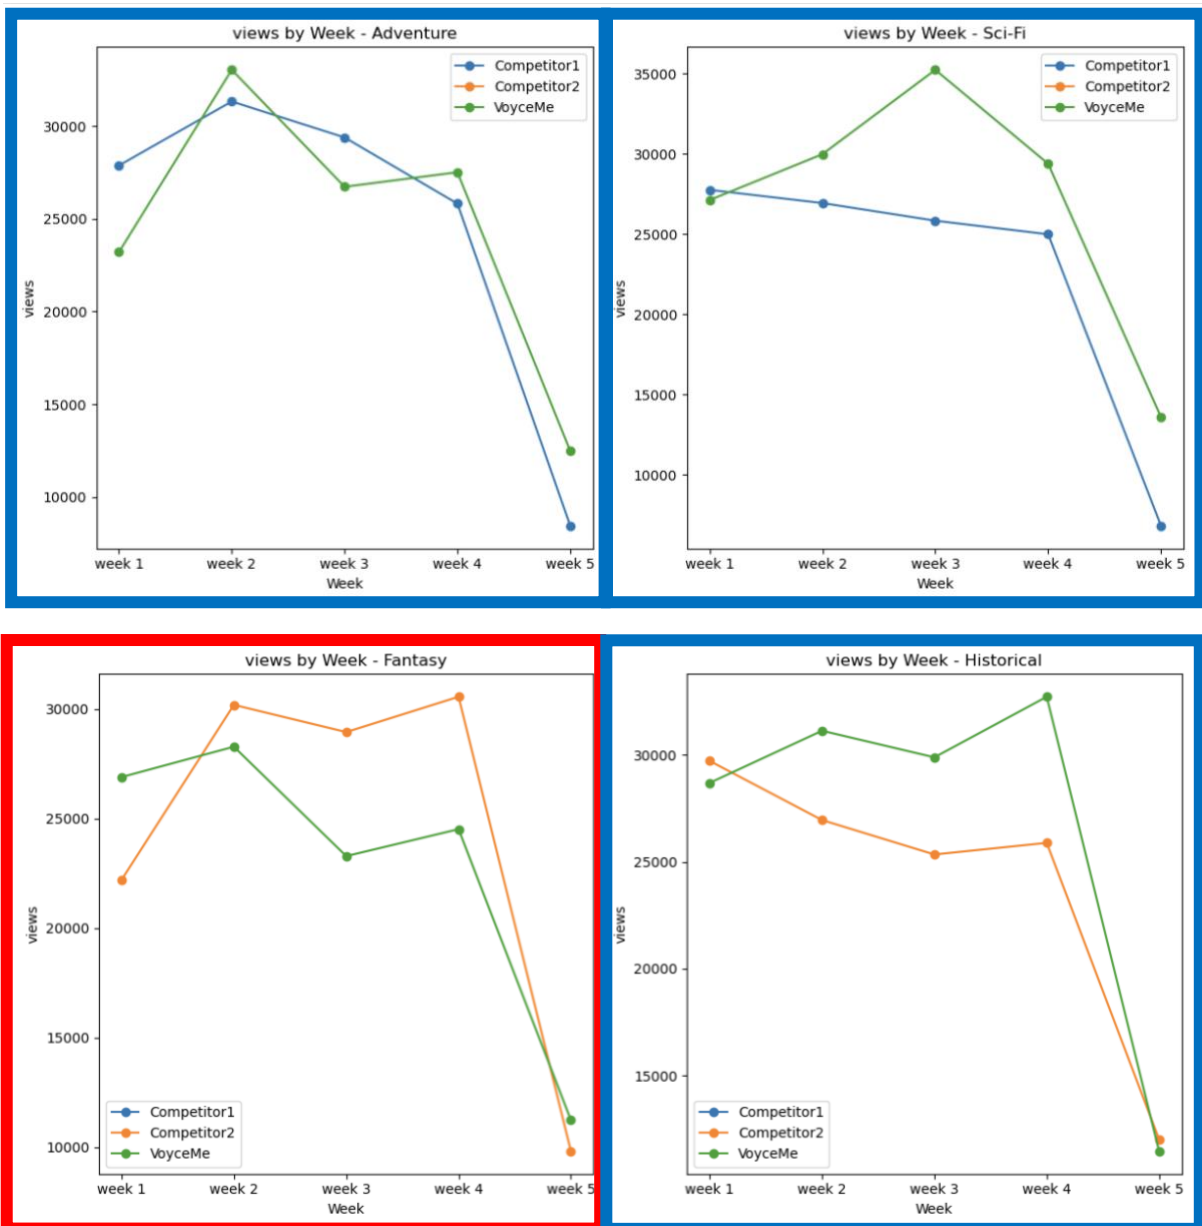

Based on the data, there are 93 unique recorded users across various platforms, including Competitor1, Competitor2, and VoyceMe. The graph depicts the number of unique recorded users for each platform categorized by genre within a month. It's worth noting that users are not exclusively interested in a single genre or series but rather engaged with multiple genres.

Observing all the genres, it becomes apparent that only the Sci-Fi genre of VoyceMe has a lower number of users compared to the other competitors in their respective genres.

Weekly Metric

The view counts for all three competitors across different genres fluctuate significantly from week to week, indicating a high level of variability in their performance. Furthermore, based on the total views per week, it can be concluded that the Sci-Fi, Historical and adventure series of VoyceMe is performing well among other genres or series. (Blue highlight)

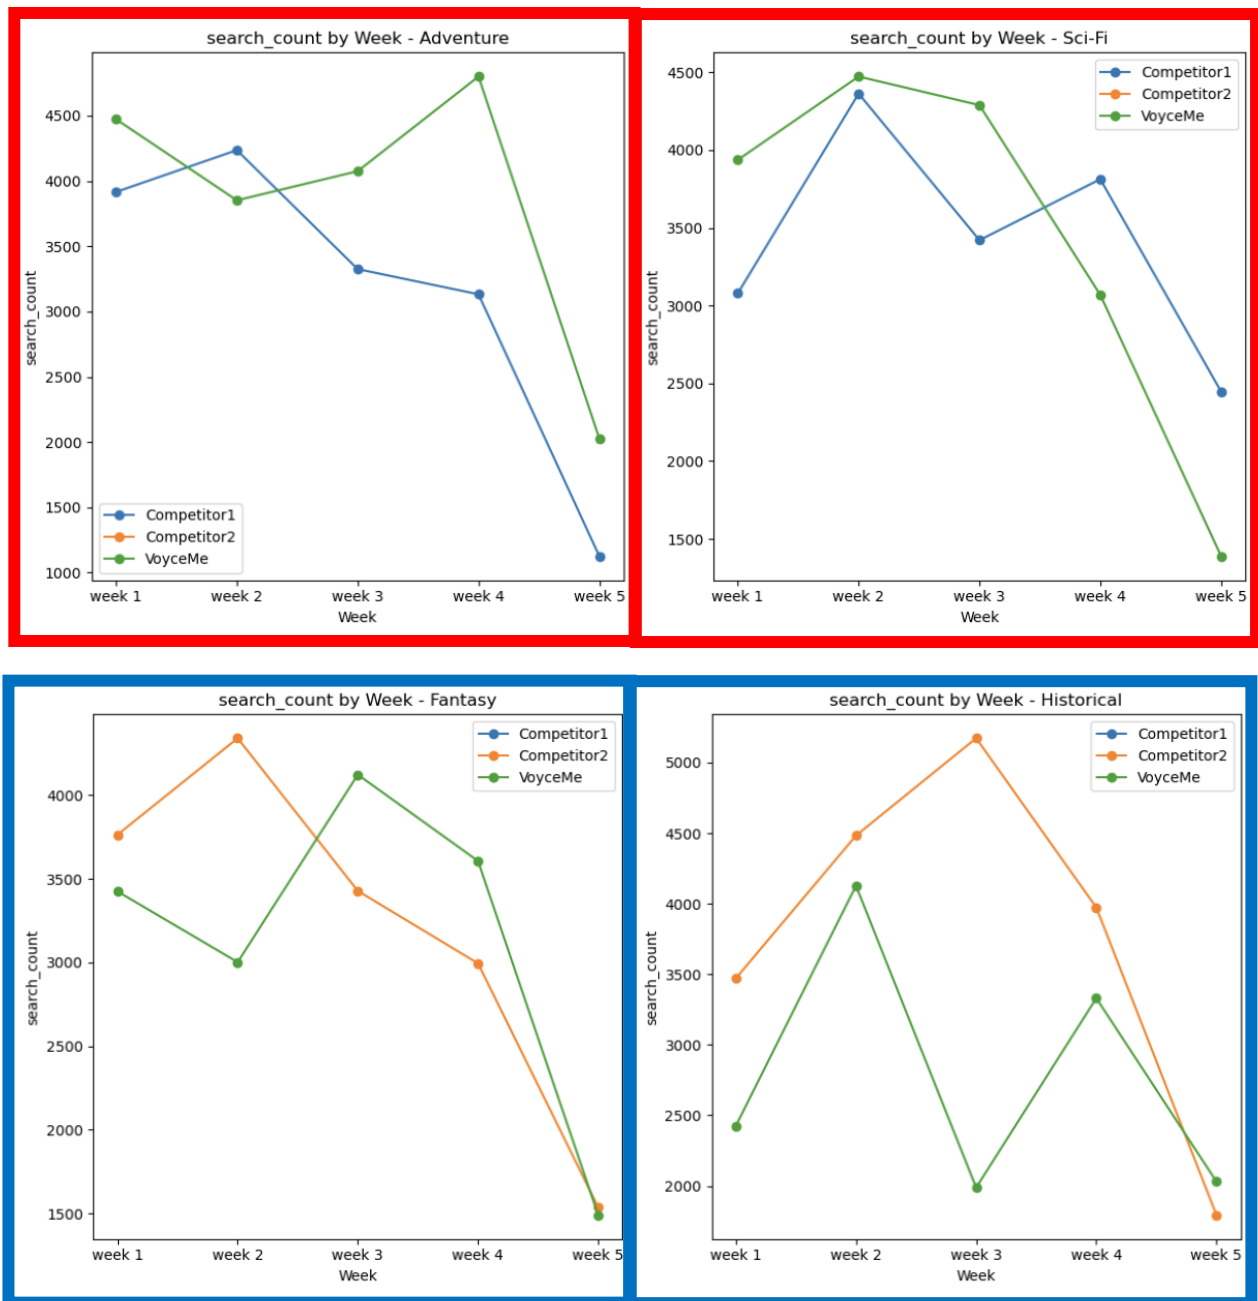

On the other hand, the Fantasy genre of VoyceMe has the lowest overall views. Though in the first week it is performing well but in the proceeding weeks it has lower views than the other competitor over the 4-week period shown. It can be influenced by many factors such as content releases, marketing campaigns, seasonality, and others. (Red highlight)

Search Count Metric

Just like the views, the search counts for all three competitors also show significant fluctuations from week to week, as depicted in the graph. However, when we specifically look at the Historical genre or series, it becomes evident that Competitor2 has the highest total recorded search count. This suggests that among the competitors, Historical and Fantasy genre of Competitor2 is particularly popular than VoyceMe. (Blue highlight)

Moreover, Adventure and Sci-Fi genre of VoyceMe has significantly good number of search counts compared to Competitor1. (Red highlight)

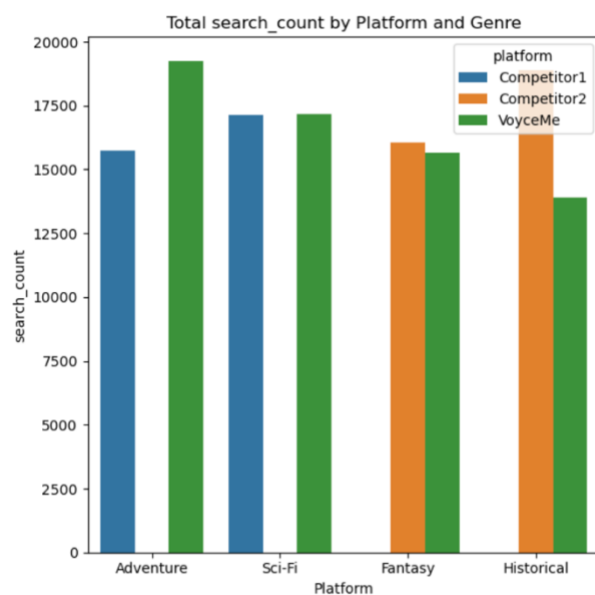

Figure 2

The second graph shows that the Adventure genre from VoyceMe exhibits the highest overall search counts among all three genres. This indicates strong viewer interest and discoverability for the Adventure genre. However, the Adventure genre may not have a significant number of views, possibly due to it being composed of short stories and more.

Among the four genres, the Historical genre from VoyceMe has the lowest overall search count.

Additionally, when we consider the customer information, the Sci-Fi and Historical genre has the lowest number of recorded users but records the highest number of views in a month. This indicates that even though there are fewer users recorded, they spend a significant amount of time viewing content in the Sci-Fi genre on the VoyceMe platform.
